something for you

HTML

CSS
Bootstrap
Animate.css

Javascript
Animations
JQuery
API Calls

The purpose of this assignment is to create a web application that utilizes HTML, CSS and Javascript, and designing a website to give to someone or a community in Hong Kong.

Think of a project that you could work on for the next ten days, and something you could build for someone (or a group of people). We will make time to present this presentation in two weeks **(April 7).**

Details are important; people end up not being careful because they have the belief that things can be completed quickly. The task of a developer, really, is to ensure that we plan out well, and give details the prestige they deserve. The better fix is to get a more accurate vision of things - good things take time to build - you don't need to aim for perfection. Aim for 'good enough'.

The purpose of this website is also for you to utilize the technologies that we go through in class, so it would be great if you could implement one thing you learned everyday and add that to your website (the most important thing is that you code the application yourself).

Requirements:
- Users will be able to understand your purpose or mission.
- Users will be able to see different kinds of media on your website.
- Users will be able to see some kind of animation on your screen (animate.css, wow.js or jQuery are great options).
- Users will be able to see data rendered from elsewhere (please make an API call - we'll go through this on day 11).
- Users will be able view your application on their mobile application (ensure that the website is mobile responsive).

Some potential ideas:
- Sell an idea
  - E.g., The importance of gaming to destress
- Informational Websites:
  - Camping Sites in Hong Kong
  - Diving Areas
